

“Your whole family can enjoy playing a Thomas Organ.”

It's the one with the keys that light up – the only one with Color-Glo!

With Thomas Color-Glo, you start to play right away!

You'd love to play real music – but you've never learned? No problem. With a Thomas organ, you and your whole family can enjoy the thrill of playing, right from the very first day.

It's possible through the magic of Color-Glo – the fascinating feature that only Thomas organs have. Press a switch and the keys light up. You see the name of every note. On the bottom keyboard, colours show you the right chords.

Now – match them all to special Color-Glo music. And you start to play, right away!

Choose from a wide range of Thomas organs, all with exclusive Color-Glo.

No matter which Thomas organ you choose, it has Color-Glo – to make sure that no-one in your family misses out on the fun.

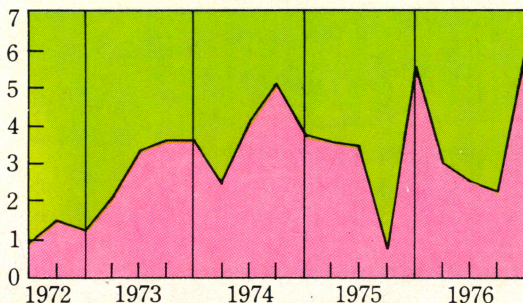

But please don't get the idea that Thomas organs are only for beginners. If you are a musician, you'll really appreciate all the Thomas voices, rhythm accompaniments and special features. Some of the world's greatest artists have played a Thomas organ – and found themselves thrilled, fascinated and challenged.

What's more, there's a Thomas organ to suit every budget. Even the lowest-priced one gives you wonderful music-making scope. And throughout the wide and constantly growing range, Thomas combine the very latest electronic wizardry with those traditional features that have always made the organ the King of Instruments.

It's a combination that can't fail to enrich your home.

A hedge against inflation.

A very important point about a Thomas organ is that it won't lose its value through inflation. So in times like these, buying a Thomas organ is a sound investment – one that will preserve its value until the time comes to trade in the organ or sell it.

Operating costs? Surprisingly low. In fact, running a Thomas organ costs about the same as running a 100-watt light bulb.

Graph Shows percentage change in inflation according to Consumer Price Index.

How Thomas helps you learn.

Quick-Play Organ Course brings out your talent.

In one optional extra package, here's everything you need to master your Thomas organ and become a truly accomplished performer – even if you've never had a music lesson before.

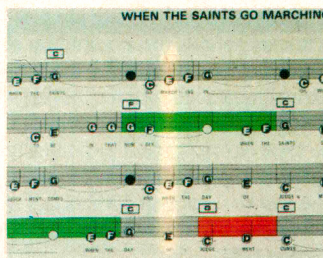

On pre-recorded cassette tapes, a leading organ teacher takes you step-by-step through the fundamentals – guides you through the course's 121 pieces of music, five learning manuals and a music theory book.

This is a complete in-home course that's totally practical and extremely good value.

Unique new "Scanner" teaches you note values.

Many people find it hard to learn note values in music – i.e., how many beats should be given to each note. The new Scanner actually shows you, visually.

It's an optional extra attachment that moves a bar of light across a special translucent copy of Color-Glo music. Just follow it, and you automatically hold down each note for the right number of beats. This unique new learning tool quickly teaches you correct note values and removes another barrier to musical fulfilment.

Hear yourself play as you learn.

Every Thomas organ has provision for a cassette tape recorder to be attached, to record directly from the organ and play back through the organ speakers. In that way you can listen objectively to your own performance and gauge your improvement from week to week.

Silent practice means you needn't disturb the family.

Here's a thoughtful optional extra – a headphone attachment that cuts off the organ speakers. You can hear yourself play, but to everyone else the organ is completely silent. So while the rest of the family watches TV, reads or talks, you can practise happily in the same room.

Or if you prefer – have personal tuition!

Despite the excellence of all these Thomas teaching aids, you may feel that personal tuition would suit you better. And that can easily be arranged. Just speak to the Thomas dealer whose name is on the back of this brochure.

How Thomas quality ensures lasting pleasure for your family

At the exterior level, Thomas quality is obvious at a glance. Every Thomas organ is a magnificent piece of furniture, imaginatively styled and hand-crafted to be a superb visual addition to your home.

But it's underneath that handsome exterior that the full Thomas quality story unfolds.

It's a story that begins with our component suppliers. They know our quality standards, and that we don't allow the slightest deviation from them.

This unyielding attitude continues right through our design, production and testing phases. For instance, while Thomas sounds are created by electronics engineers, they're checked for authenticity by professional musicians. As for testing – our quality control engineers often spend over 8000 hours on just one type of organ. And periodically we take a few organs at random from stock and really give them the works – around 4000 hours of testing that includes electrical current variations, tropical heat and freezing cold.

The people who make and test Thomas organs are proud of them. They want you to look forward to years of family pleasure from your Thomas organ.

And because of their uncompromising attitude, you can.
